

About Us

Quite simply, we are gamers just like you. We have been racing simulators for years and over those years, we have purchased almost every simulator available.

Every new simulator bought us new hopes of realism in the quest to get as close as possible to the real thing. Unfortunately, each new simulator also bought disappointment. Sure they were fun at first, but it's hard to imagine yourself in a real V8 race car when you are really sitting in an arcade style simulator and sure the sound is pretty good through the headphones and force feedback steering makes a difference, but we never got the feeling of sitting in a real V8 race car.

To add insult to injury, many of the simulators we bought were not suitable for the larger person, little cockpits look great, but they aren't practical for everyone, nor do they provide that real "V8 race car car feeling".

That's when we decided that what we needed was a real car. A real V8 vehicle with all the trim, the smell of a real car and the realism of strapping yourself into the race seat and slamming the door closed. The sounds of the race pumping through the interior as you fight the steering and work the pedals through every twist and turn.

A simulator that delivered a real car experience without discriminating on drivers, regardless of their age, size or ability.

Is this a simulator or is it real..... the line becomes blurred as you lose yourself in the most addictive experience of V8 racing.
